

## Public Duty Factsheet — example role archetypes

How a public duty profile looks in public grid lenses. Illustrative examples · not specific assets · public-lens facts only.

### Public Duty Factsheet · Example A

illustrative · not a specific asset

#### High-cadence / low-volume

Frequently instructed, small energy per action — a public shock-absorber footprint.

BM events / day	~105
Direction switches / day	~21
Longest quiet gap	~9 h
Cadence vs peers	~98th percentile
Declared capability (MEL)	~50 MW export declared
Public metered trace (B1610)	present · bidirectional throughput
Registry (REPD)	Operational
Public-identity match	high (assetId)
Window / maturity	rolling 30d · mature (BM current)

This card compiles public-lens facts only. It does not assess consistency, asset condition, availability, risk, fault, fatigue, credit, underwriting, or causality.

### Public Duty Factsheet · Example B

illustrative · not a specific asset

#### Low-visible-BM / metered-public-trace

Little or no balancing-mechanism footprint, yet a public metered trace is present.

BM events / day	0 (BM-silent)
Direction switches / day	—
Longest quiet gap	full window
Cadence vs peers	—
Declared capability (MEL)	declares zero
Public metered trace (B1610)	present · ~20 MWh/d bidirectional (lagged)
Registry (REPD)	Operational
Public-identity match	weak (name-fuzzy)
Window / maturity	BM 30d · metered lens lagged (~T+7) · maturity mixed

This card compiles public-lens facts only. It does not assess consistency, asset condition, availability, risk, fault, fatigue, credit, underwriting, or causality.

### Public Duty Factsheet · Example C

illustrative · not a specific asset

#### Registry-lag / public-identity ambiguity

Public registry status is ambiguous relative to the observed public footprint.

BM events / day	low / intermittent
Direction switches / day	~few
Longest quiet gap	long
Cadence vs peers	below median
Declared capability (MEL)	partial
Public metered trace (B1610)	intermittent
Registry (REPD)	Planning Permission Granted (quarterly, stale)
Public-identity match	weak (name-fuzzy, quarterly)
Window / maturity	mixed · registry stale — identity unresolved

This card compiles public-lens facts only. It does not assess consistency, asset condition, availability, risk, fault, fatigue, credit, underwriting, or causality.

**A named factsheet on a specific asset — or an authorised evidence pack — is produced only under your review authorisation.**

A separate, private engagement. Public physical ledger · GB grid & storage.
